

Large or small... we treat them ALL!

It is necessary to accurately estimate or measure the size of the intended treatment area. One acre is a surface area measurement of 43,560 square feet.

One acre-foot is a volume measurement of 325,850 gallons.

Pond volume equals the surface acreage times the average depth of the pond.

To calculate surface acres of a square or rectangular pond, multiply the width by the length.

To calculate surface acres for circular or oval ponds, multiply the circumference of the pond in feet by itself then divide that number by 547.390.

To calculate the average depth of the pond, measure the depth of 15 points throughout the pond, add the number together then divide by 15.

Also Available at Greier Ag Center

Available in gallons, quarts & pints
Nontoxic • Nonpathogenic

Microbe-Lift PL®
The #1 Pond Clarifier requested by name

Specially formulated for decorative ponds and lagoons, Microbe-Lift PL creates a healthy pond environment. It reduces unpleasant odors, improves dissolved oxygen levels and is safe for fish plants and other animals.

Catt Plex

Cattails are a very common problem for ponds and lakes. Catt Plex is a herbicide that eliminates shore and surface aquatic weeds. It can also be an effective turf solution for controlling over 100 troublesome grasses and broadleaf weeds.

Aerators & Fountains

Decorative water fountains and aerators not only improve the aesthetics of your pond, lake or deco pond but they also enhance the health of the wildlife by reducing algae and organic contaminants.

Our aerators and fountains use green technology to save you money and maximize efficiency.

Copper Sulfate

Available in 4, 15, and 50 pound packages.
